

THE LABORATORY OF TREE-RING RESEARCH

presents a talk by

Hans Linderholm

(Department of Earth Sciences, University of Gothenburg, Sweden)

A Tree-Ring Smorgasbord

Monday, May 11, 2015 - 2:00pm to 3:00pm

Room: Bannister 110

A traditional Swedish smörgåsbord contains many dishes, where you usually sample a little of each. In this talk, I will serve a tree-ring based smorgasbord, based on my career as a tree-ring scientist over the last twenty years or so. I will guide you through various environments and research projects across the world, with some special focus on the long-term research conducted in the central Scandinavian Mountains. Also, I will discuss the merit of using tree-ring proxies to understand the large-scale circulation and associated teleconnections in the past, but also the importance of developing new proxies and methodologies in dendrochronology, as well as cross disciplinary research.
